Web Prototype and Wireframes

Philosophy: The goal of this design project is to replace the current system of recording Emotional Chart data with a simple to use web application. The philosophy behind the project is to create a web application that is as easy or easier to use than the current system. We will accomplish this task by improving the overall efficiency, reducing the amount of data entry and reducing the margin for error.

Phase 1: Familiarization and Web Prototype

- 1) Familiarized self with the UEGroup's Emotional Chart by interviewing researchers and shadowing process
- 2) Created web prototype of UEGroup's Emotional Chart using HTML / CSS / JS / Node.js / Express.js

Phase 2: Research and Docs

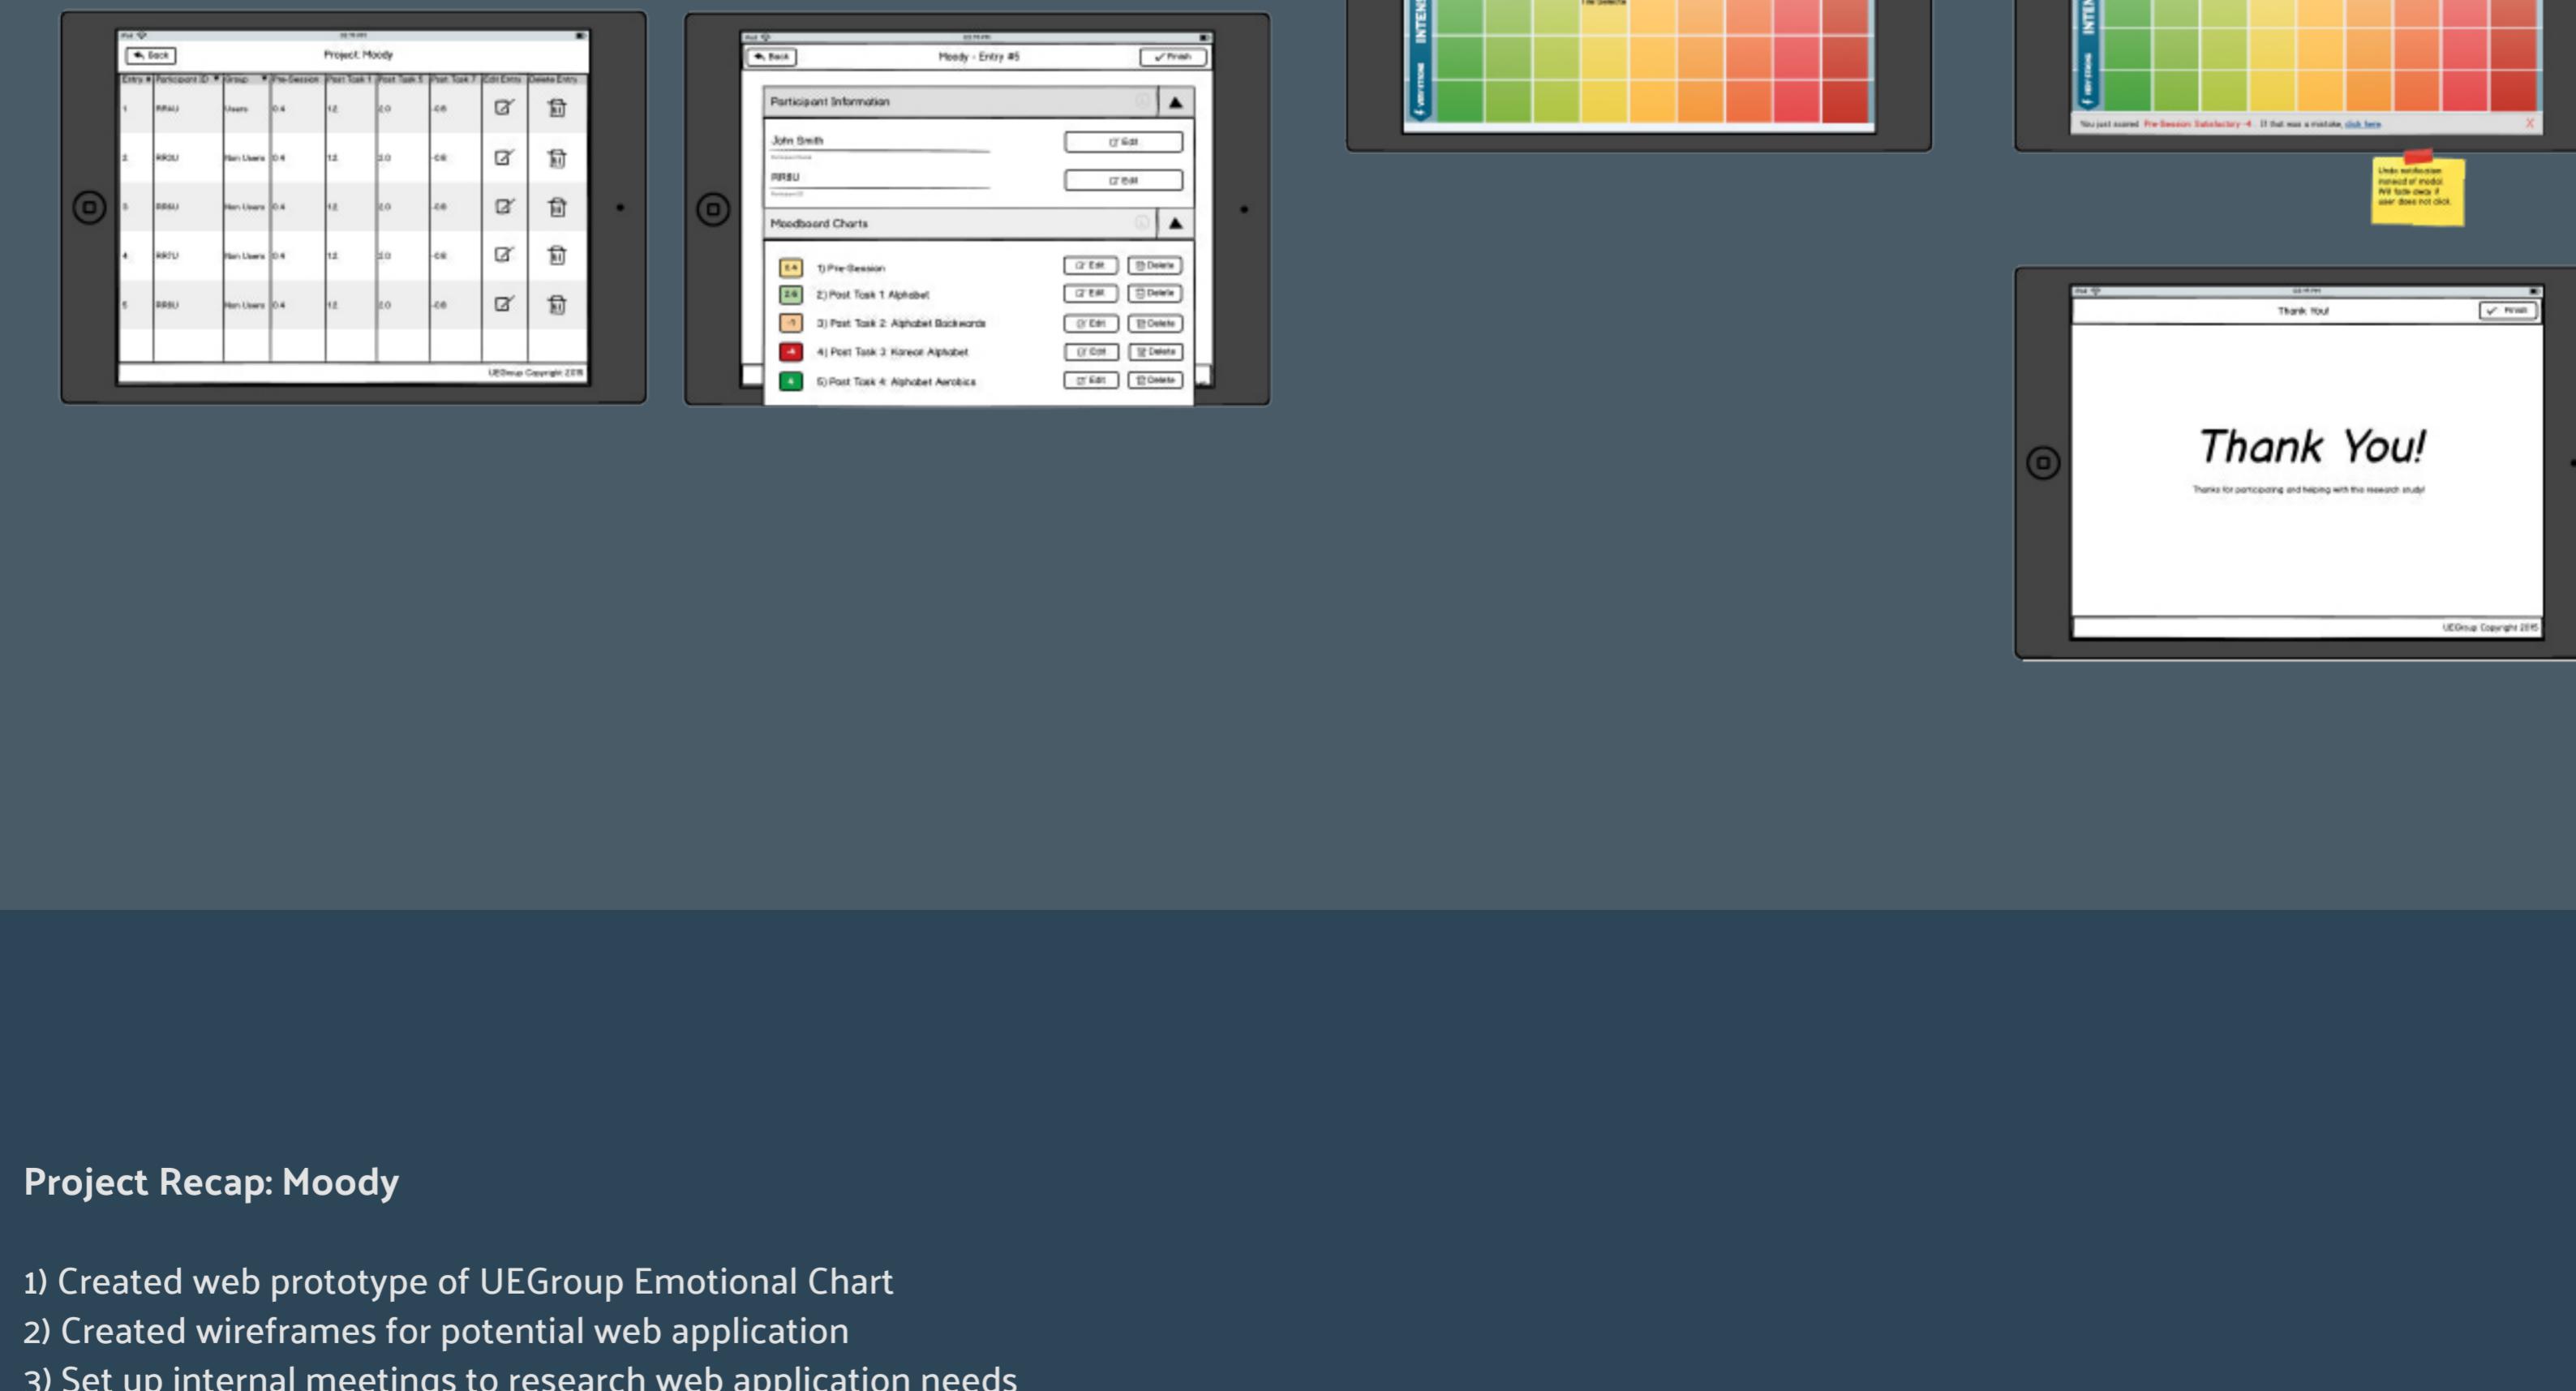

- 1) Held meetings with UEGroup researchers to discuss needs vs. wants for potential web app
- 2) Created Use Cases document, Needs vs Requirements document and Initial release implementation steps

Wireframe: Alpha

Wireframe: Beta

Project Recap: Moody

- 1) Created web prototype of UEGroup Emotional Chart
- 2) Created wireframes for potential web application
- 3) Set up internal meetings to research web application needs
- 4) Created documents detailing use cases, implementation steps and needs vs. wants
